

Forum Highlights & Takeaways

Cherri-Ann Farquharson

Climate-Energy Nexus

- Climate and energy are inextricably linked. It is, therefore, imperative that we bridge the Chinese wall between the ministries and agencies responsible for energy and climate
- Climate action is important as the impacts span water and food
- The climate conversation for the Caribbean is about our people, their lives and livelihoods

Why Decarbonise?

- We may not save the world from the climate perils by decarbonizing our economies. Investing in indigenous sources of energy for domestic use is about ensuring our energy security which translates into sovereign security
- We have significant renewable resource potential which may be used as fuel or feedstock

How May We Decarbonise?

- Geothermal Resource Development, Offshore Wind Development, and Electric Vehicles driven by Incentives have the potential to accelerate the transition
- We can't talk transition and not consider the economics of it
- A just transition ensures that not only the investors can participate in the decarbonization of sector but all citizens
- Public Awareness and capacity building are crucial for our children and residents to embrace the transition, minimize the misconceptions, and actively participate in making the region more sustainable

Why Transport?

- A well needed energy forum dedicated to transport
- Transport sector consumes the lions share of carbon based fuels in most countries across the region
- Transport sector is one of the hard to decarbonize sectors

Powering Transport

- Electric Vehicles (EVs) are ready for the Caribbean
- Beyond EVs, sustainably powering transport gives us the opportunity to further diversify our energy mix including hydrogen and ammonia
- Learn by doing

Green Hydrogen and Electrofuels

- Green Hydrogen is on a clear path to sustainability
- The challenges to bankability are surmountable
- Regional energy integration including interconnection for the transfer of electrons or the transmission of other energy carriers ought to be explored
- Regional cooperation is essential for the success of a hydrogen industry

Call to Action

- We need energy champions
- A responsibility to lead the change when we return home
